Thin Film 6 Roll Sheet Cleaner System

Polymag Tek's "Thin Film" Sheet Cleaner System (model 6RSC-TF) is designed to remove loose particulate contamination from very thin (.002"-.01 thick) sheeted substrates. The four Polymag® Blue Contact Cleaning Rolls (CCR's) contact both sides of the sheet as it is transported through the unit. Surface contamination is transferred from the sheet to the CCR's. The 2.0" O.D. CCR's are then continuously cleaned with Two Adhesive Tape Rolls.

The bottom CCR assembly is driven by a variable speed motor. The speed of the sheet cleaner can be adjusted manually from the Operator Display located on the electrical equipment panels.

The contamination from the sheets collect on the surface of the AdhesiveTape Rollers. When these rolls become saturated, a layer of tape can be removed.

Approximately one foot of tape is used per tape change.

***All Our Web & Sheet Cleaner Systems can be custom designed to fit any application using Polymag® Patented Technology. Patent: 5,913,345**
