

Step-Traversing Process Roll Cleaner

ContactClean™ Process Roll by PolymagTek, Inc.

Wide, fabric-covered, touch roll cleaning head performs zonal steps during a quick, traversal cleaning of the rotating process roll surface. Fabric is refreshed at each step completion via an unwind/rewind system on the cleaning head.

Applications

- Dry, on-line cleaning of condensate, precipitate or oligomer build-up on chill, casting and chrome rolls

Features

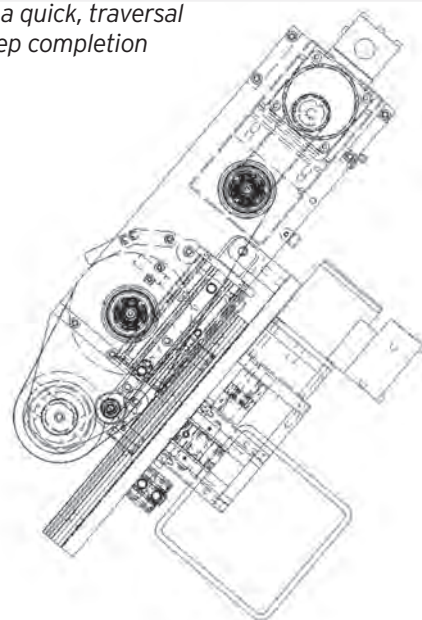

- Provides on-line cleaning capability
- Programmable cleaning sequence
- Adjustable pneumatic touch cleaning force
- Efficient utilization of cloth with adjustable cloth advance
- Easy cloth change out
- Cloth out detection
- Step-traversing PRC head for wide applications

Process Parameters

- Process roll surface temperatures up to 400 °F (204 °C)
- Equipment exposure ambient temperature up to 212 °F (100 °C)

Options

- Custom mounting designs
- Higher-heat application packages upon request
